

MENTAL HEALTH

MENTAL HEALTH RESEARCH SUMMARY

A collection-level view of the four condition-specific decision-text datasets used in this visual library.

FOUR CONDITION DATASETS

WHAT THE MENTAL-HEALTH RESEARCH COLLECTION COVERS

DATASET	SCANNED	GRANTED	TOP EVIDENCE MARKER	TOP GRANTED-CASE SYMPTOM
Depression and adjustment disorders	67,467	8,236	Causation link argued (secondary to / caused by / due to) 20,661 decisions	Anxiety 59.5% of granted
Anxiety disorders	49,678	3,937	Causation link argued (secondary to / caused by / due to) 6,769 decisions	Depressed mood 55.9% of granted
Schizophrenia and psychotic disorders	8,922	1,842	Hallucinations or delusions documented 6,121 decisions	Delusions or paranoia 64.5% of granted
Bipolar disorder	5,130	905	Causation link argued (secondary to / caused by / due to) 1,365 decisions	Depressed mood 40.0% of granted

HOW TO USE THE LIBRARY

THREE LEVELS OF INFORMATION

1

LEGAL FRAMEWORK

Diagnosis, service connection, the combined mental-health rating rule, and current rating criteria.

2

FUNCTIONAL EVIDENCE

Frequency, severity, duration, occupational effects, social effects, and daily functioning.

3

BOARD DECISION RESEARCH

Patterns found in published decision text, reported with condition-specific denominators and artifact dates.

!

NOT A PREDICTION MODEL

Past Board decisions do not predict an individual claim. Marker presence is not a requirement and symptom frequency is not prevalence.

DATA SOURCE: RateMyVSO condition-evidence artifact dated 2026-09-23. The broader RateMyVSO database contains 1,912,417 published Board decisions across AMA and Legacy eras. Each research panel uses only its named condition-specific subset.
